## CRUSHED STONE AND SAND AND GRAVEL IN THE FOURTH QUARTER 2005

An estimated 405 million metric tons of *crushed stone* was produced and shipped for consumption in the United States in the fourth quarter of 2005, a slight increase compared with the same period of 2004. The estimated annual production of *crushed stone* shipped for consumption in 2005 was 1.6 billion metric tons, an increase of 2.5% compared with 2004.

The estimated output of *construction sand and gravel* produced for consumption in the fourth quarter of 2005 was 307 million metric tons, an increase of 3% compared with the same period of 2004. The estimated annual production of *construction sand and gravel* shipped for consumption in 2005 was 1.25 billion metric tons, a slight increase compared with 2004.

An estimated 715 million metric tons of total *aggregates* (crushed stone, sand, and gravel combined) was produced and shipped for consumption in the United States in the fourth quarter of 2005, compared with 707 million metric tons in the same period of 2004. The estimated 2005 total annual production of *aggregates* produced for consumption was 2.9 billion metric tons, a 1.8% increase compared with 2004.

The above estimates are based on information reported to the U.S. Geological Survey (USGS) quarterly sample survey by *crushed stone* and *construction sand and gravel* producers.

In the fourth quarter of 2005, there was a 6.5% increase in portland cement consumption compared with the same period of 2004, and a 5.7% increase for 2005 compared with 2004, another indication of increased construction activity at the national level.

The USGS quarterly survey on domestic production of *crushed stone*, *construction sand and gravel*, and *aggregates* has become a significant indicator of construction activity at the national as well as State level. This survey is a sample survey that generates production for consumption estimates by quarters for each State, except Alaska and Hawaii, and each geographic division, based on information reported voluntarily by a limited

number of producing companies. Occasionally, the number of companies reporting in an area varies from quarter to quarter, or previously reported data by some companies are revised. If such changes in the size or the composition of the statistical sample occur, the estimated quantities for prior quarters are recalculated. The latest release of the quarterly Mineral Industry Surveys contains the most recent estimated totals and percentage changes and supersedes previously published information.

The production-for-consumption estimates for *crushed stone*, *construction sand and gravel*, and *aggregates*, are generated independently for each State and each geographic division, which are treated as separate statistical sample areas. Therefore, some differences may exist between the total for a division and the sum of State totals that are part of the same geographic division.

The leading geographic divisions in the production of *crushed stone* sold or used in the fourth quarter of 2005 were the South Atlantic with 102 million metric tons, or 25.2% of the U.S. total, followed by the East North Central with 72.2 million metric tons, or 17.8%, and the West South Central with 52.2 million metric tons, or 12.9%.

The estimated *crushed stone* sold or used in the fourth quarter of 2005 increased in five of the nine geographic divisions compared with the same period of 2004. The largest increases in percentage were recorded in the West South Central (10.4%), the East South Central (9.8%), and the Mountain (6%) divisions. Decreases in the production of *crushed stone* ranged from 9.8% in New England division to 1.1% in the South Atlantic division.

The leading geographic divisions for the total amount of *construction sand and gravel* sold or used in the fourth quarter of 2005 were the Mountain with 64.3 million metric tons, or 20.9% of the U.S. total, the Pacific with 58.2 million metric tons, or 19%, and the East North Central with 54.5 million metric tons, or 17.8%.

The estimated *construction sand and gravel* sold or used in the fourth quarter of 2005 increased in four of the nine geographic divisions compared with the same period of the previous year. The increases in percentages were recorded in the Mountain (8.9%), the Pacific (6.9%), the West South Central (5%) and the West North Central (2.2%) divisions. The largest decreases were recorded in New England (-11.5%), the Middle Atlantic (-8%) and the East North central (-4.8%) divisions.

The leading geographic divisions for the total amount of *aggregates* sold or used in the fourth quarter of 2005 were the East North Central with 129 million metric tons, or 18% of the U.S. total, followed by the South Atlantic with 124 million metric tons, or 17.3%, and the West South Central with 83.4 million metric tons, or 11.7%.

The estimated U.S. output of total *aggregates* sold or used in the fourth quarter of 2005 increased in percentages compared with the prior year in six of the nine geographic divisions. The largest increases were recorded in the West South Central (9.3%), the East South Central (8.5%), and the Mountain (8.4%) divisions. The largest decrease was recorded in the New England (-10.2%) division. The estimated totals by quarters for the geographic divisions do not include Alaska and Hawaii.

Production for consumption of *crushed stone* increased in the fourth quarter of 2005 in 18 of the 39 estimated States, compared with the same quarter of 2004. Significant increases in production occurred in Utah (47%), Kentucky (29.4%), Oregon (27.2%), New York (14.6%), and Kansas (13.9%). Significant decreases in production of crushed stone in the fourth quarter of 2005 occurred in Wisconsin (-22.2%), Idaho (-18.7%), Massachusetts (-17%), and Ohio (-16.6%).

The five leading States in the production for consumption of *crushed stone* in the fourth quarter of 2005 were Texas, Florida, Pennsylvania, Illinois, and Georgia. Their combined total production for consumption was 32% of the U.S. total.

Production for consumption of *construction sand and gravel* increased in the fourth quarter of 2005 in 16 of the 42 estimated States, with significant increases in percentages recorded in Arkansas (23.7%), Arizona (23.4%), Iowa (22.1%), Oregon (20%), and Wyoming (13.2%). Significant decreases in the production of *construction sand and gravel* occurred in Vermont (-33.3%), North Carolina (-18.9%), and South Dakota (-15%).

The five leading States in the production for consumption of *construction sand and gravel* in the fourth quarter of 2005 were California, Arizona, Texas, Michigan, and Ohio. Their

combined total production for consumption was 36.1% of the U.S. total.

The estimated total *aggregates* sold or used in the fourth quarter of 2005 increased in 20 of the 45 estimated States, compared with the same quarter of 2004. Significant increases in production occurred in Kentucky (28.4%), Oregon (23.7%), Arizona (23.5%), Arkansas (12.1%), and Kansas (12%). Significant decreases in production of *aggregates* in the fourth quarter of 2005 occurred in Idaho (-24.4%) and Vermont (-20.8%).

The five leading States in the estimated production-for-consumption of total *aggregates* in the fourth quarter of 2005 were Texas, California, Florida, Illinois and Pennsylvania. Their combined production was 29.1% of the U.S. total.

The fourth quarter survey also provides annual preliminary estimates by State for 2005. The 10 leading States in descending order of production of *crushed stone* for 2005 were Texas, Florida, Pennsylvania, Illinois, Georgia, Missouri, Virginia, North Carolina, Ohio, and Tennessee. Their combined total production for consumption was 53.8% of the U.S. total.

The 10 leading States in descending order of production of *construction sand and gravel* for 2005 were California, Arizona, Texas, Michigan, Minnesota, Ohio, Nevada, Wisconsin, Colorado, and Washington. Their combined production for consumption was 53.9% of the U.S. total.

The 10 leading States in descending order of production of *total aggregates* for 2005 were Texas, California, Florida, Pennsylvania, Illinois, Ohio, Arizona, Michigan, Missouri, and Georgia. Their combined production for consumption was 45.6% of the U.S. total.

A total of 267 companies representing *crushed stone* and *construction sand and gravel* producers reported production for consumption information to the fourth quarter sample survey. The large participation of the producing companies in this survey is reflected by the high percentage coverage obtained for most geographic divisions and States. The percentage coverage indicates how much of the total estimated production for consumption for a State or a geographic division was actually reported by companies participating in this survey and was used to generate the estimated totals for that particular area.

The percent changes between the estimated production for consumption for the current quarter and the same quarter of the prior year included in this report are important indicators of the production/consumption trends occurring in a particular area of the country.

XX Not applicable.

<sup>1</sup>Quarterly totals shown are estimates based on a sample survey. Estimated quantities for prior quarters have been recalculated.

<sup>2</sup>Data may not add to totals shown because of independent rounding, and differences between projected totals by States and by divisions.

<sup>3</sup>Number of companies reporting for the quarterly survey.

<sup>4</sup>State not included in quarterly survey.

<sup>5</sup>Owing to a low number of reporting companies, no production estimates by quarters were generated.

<sup>6</sup>To avoid disclosing proprietary data, certain State totals do not include all kinds of stone produced within the State; the portion not shown has been included with "Other."

<sup>7</sup>Compared with same period of preceding year; all percentages are calculated using unrounded totals.

XX Not applicable.

<sup>1</sup>Quarterly totals shown are estimates based on a sample survey. Estimated quantities for prior quarters have been recalculated

<sup>2</sup>Data may not add to totals shown because of independent rounding, and differences between projected totals by States and by divisions

<sup>3</sup>Number of companies reporting for the quarterly survey

<sup>4</sup>State not included in quarterly survey.

<sup>5</sup>Owing to a low number of reporting companies, no production estimates by quarters were generated

<sup>6</sup>Compared with same period of preceding year; all percentages are calculated using unrounded totals

XX Not applicable.

<sup>1</sup>Quarterly totals shown are estimates based on a sample survey. Estimated quantities for prior quarters have been recalculated.

<sup>2</sup>Data may not add to totals shown because of independent rounding, and differences between projected totals by States and by divisions.

<sup>3</sup>Number of companies reporting for the quarterly survey.

<sup>4</sup>State not included in quarterly survey.

<sup>5</sup>Owing to a low number of reporting companies, no production estimates by quarters were generated.

<sup>6</sup>To avoid disclosing proprietary data, certain State totals do not include all kinds of stone produced within the State; the portion not shown has been included with "Other."

<sup>7</sup>Compared with same period of preceding year; all percentages are calculated using unrounded totals.
